

Dr Euan Brown

I joined Heriot Watt University in 2012 after working in neuroscience and biophysics in Marine laboratories (the Zoological Station Naples, the Marine Biological Association Plymouth) and University Biomedical Science faculties (Kings College London and Leicester University). I have also initiated and worked closely with the EU and UN on science policy including scientific infrastructure and (PG) training. I teach undergraduates across disciplines in EPS (Chemistry and Physics) and across schools (EPS and EGIS). I also serve as the Head of the Graduate School in EPS and have recently joined the EPS undergraduate studies committee. I maintain an active research program in cell and tissue biophysics. As a result of these various activities, I feel I am in a good position to see opportunities and to help enhance academic standards within our school and across the university. I strongly believe that the university must have mechanisms in place that enable the full spectrum of individual contributions to be recognised.
